Summary

Computer Science undergraduate and active open-source contributor to CNCF and the Observability ecosystem, focused on systems-level tooling in Go, Java, and Dart. Builds robust Full-Stack and ML/AI projects end-to-end, from designing data ingestion pipelines to deploying scalable applications. Passionate about experimenting with advanced AI agent tooling and delivering high-performance software solutions.

Work Experience

Contributor and Triager **Apr 2026 – Present**
OpenTelemetry

– Contribute to OpenTelemetry Collector Contrib and Java Contrib, fixing bugs and improving telemetry infrastructure across multiple receivers and components. Trusted as a triager for the OpenTelemetry Dartastic SDK and API, reviewing issues and pull requests to maintain code quality and project health. Collaborate with a global open-source community on systems-level Go and Java development for observability tooling.

Open Source Developer **Feb 2026 – May 2026**
Cloud Native Computing Foundation (CNCF)

– Actively contributed as an open-source engineer and code reviewer to high-impact distributed systems, observability tooling, and data orchestration platforms.
– **Layer5 & Meshery:** Authored and reviewed code for meshery, meshery-extensions, and layer5io.
– **Jaeger:** Authored pull requests for jaegertracing.
– **Kestra:** Authored pull requests for kestra-io.

Intern **Apr 2025 – Jun 2025**
Prashasvi Autotech Solutions Pvt. Ltd.(CarCID), Onsite *Delhi, India*

– Built and deployed city-specific landing pages using WordPress and custom HTML/CSS, ensuring consistent design and functionality across multiple locations. Optimized on-page SEO (meta tags, headings, site structure) to improve organic visibility and search rankings.

AI Trainer **Nov 2024 – Dec 2024**
Outlier AI, Remote

– Evaluated and ranked LLM-generated responses for correctness, reasoning quality, and safety on coding/technical prompts. Delivered structured feedback that fed directly into model training data, improving output accuracy on technical tasks.

Projects

- **NyxChat** GitHub
  A privacy-first peer-to-peer messaging application. By leveraging BLE mesh networking and end-to-end encryption, it eliminates the need for central servers, ensuring your data stays yours—even in off-grid environments.
- **Krtrimahastah** GitHub
  Open-source, low-cost prosthetic arm bridging the gap between expensive bionic limbs and passive cosmetic devices; a fully functional, multi-modal assistive device for under $100 USD. Achieved 5 degrees of freedom (5-DOF) in the prototype hand.
- **Netra** GitHub
  AI platform to detect suspicious and complex money-laundering patterns using hybrid risk scoring. Built a CSV ingestion pipeline with an Isolation Forest model for anomaly detection, Gemini API for automated risk summaries, and Neo4j for graph-based transaction visualization.
- **Hybrid Stock Market Prediction Model** GitHub
  An open-source quantitative forecasting engine. Features a PyTorch Time-Series Transformer, Bayesian architecture optimization, and dynamic Volatility-Aware (VIX) Meta-Learning.

Technical Skills

- **Programming:** Python, JavaScript, Typescript, HTML, CSS, Go, Dart, Java, SQL
- **Libraries/Frameworks:** TensorFlow, Keras, PyTorch, Scikit-learn, OpenCV, Seaborn, React.js, Next.js, Flask, FastAPI, Neo4J
- **Tools:** Git, GitHub, Docker, Linux/WSL, WordPress, Firebase, Figma, Claude, Postman, Google Cloud, OpenTelemetry, Jeager, Prometheus

Achievements

- Finalist at CIIS National CyberShield Hackathon 2025 among 1100+ teams.
- Top 1% ranking in MLH Global Hack Week: Cloud Week 2024.

Certifications

- Getting Started with OpenTelemetry — *The Linux Foundation*
- Inclusive Open Source Community Orientation — *The Linux Foundation*
- Certified Meshery Contributor — *Meshery - CNCF*

Education

VIT Bhopal University, Bhopal **2027**
B.Tech in Computer Science *CGPA: 8.16*

Extracurricular Activities

- **Tech Team Core Member**, Software Development Club VIT Bhopal Nov 2024 – Aug 2025
- **Club Member**, GeeksforGeeks Club VIT Bhopal Mar 2024 – Jun 2024
